CHILDREN OF MATTER

FILLS DE LA MATÈRIA

BY ENRIC SANT

Children of Matter is an abstract journey through the origin of life linked to the cosmos and expressed through a poetic perspective with surrealist overtones.

The piece narrates a passage that begins with an image illustrating the first time the human being asks himself about his origin as an inhabitant of the Universe.

From this starting point begins a journey through various thoughts that meditate on existential questions. A symbolic and aesthetic journey featuring different shapes, colours, and figures in which the rational and the sensory often get confused.
